# Projects

## SABS System

- The SABS System is a tailored solution designed exclusively for the authority, providing efficient and streamlined management of various aspects of the organization's operations. This user-friendly POS system caters to the unique needs of the SABS community, making it a valuable asset for temple staff, volunteers, and members alike

## Food POS System

- Catering to both our hardworking staff and valued customers, the cutting-edge POS System has been meticulously designed to empower our food sellers and employees, streamlining their daily tasks, be it deftly closing sales or expertly managing inventory. But that's not all! For our treasured patrons, we've introduced a sleek and user-friendly mobile interface, ensuring that food ordering becomes not just effortless but also a delightful experience!

## An Electric Vehicle Trip Planner Based on Google Maps

- Amid the rising popularity of electric vehicles (EVs), my research focuses on enhancing the convenience of urban travel for EV drivers. Aim to develop an application that strategically plans routes, identifies optimal charging station locations, and minimizes driver concerns. By addressing factors like traffic, efficient charging, and infrastructure placement, the research aims to ensure EV owners enjoy worry-free trips with sufficient power. The project's core objective is to create a user-friendly GUI that assists EV drivers in planning efficient road trips.

## Jewellery and Stock System

- Jewellery and Stock System has been tailor-made with the sole purpose of assisting our dedicated staff and employees in their daily tasks, whether it involves crafting sales or efficiently managing our inventory.

## Travel and Trip Management System

- The Travel and Trip Management System is a web-based platform that simplifies travel booking. Customers can easily view, book, and purchase travel packages, providing convenience for all parties, including customers, administrators, and agency partners. Administrators maintain and manage the system, while agencies contribute resources and negotiate contracts with travel companies. This report covers the project's introduction, scope, methodology, design, implementation, testing, and demonstration.
